

Military Collegiate School Khulna

(Pioneer in English Version Residential School)

Estd: 2002 | EIIN: 133213 | College Code: 3507 | School Code: 2728

TO WHOM IT MAY CONCERN

I was Bushra's teacher in grades 7 and 8, introducing physics to spark her interest, and later joined the Physics department during her 11th and 12th grades. In those early years, I taught basic physics concepts to 7th and 8th graders to encourage them toward science by 9th grade. Bushra stood out—she was always curious and hungry to learn more. She'd visit the library during free periods, where I spent my off time, and I'd teach her advanced topics and tough problems. She grasped them so fast it amazed me. She used to ask me about physics concepts and critical physics problems. Sometimes her questions amazed me about how a school student could ask such deep questions, but I never discouraged her in her curiosity; rather, I used to inspire her to explore that topic even more.

Her hard work paid off in big ways. She earned 31st place in the BUET entrance exam and took 1st in the regional rounds of the Bangladesh Physics, Math, Astronomy, and Astrophysics Olympiads. Those wins showed her dedication clearly. Bushra was incredibly productive—I never saw her tire. At science fairs, she'd stay up late, like when she built her 11th-grade solar-powered water purifier, Gusto. She'd skip sleep to finish, pushing herself hard.

Her time management was something else. She balanced schoolwork, extracurriculars, being a house prefect, junior house prefect, class prefect, and joining clubs, all while staying on top of her class. I tell my students about her as an example of perseverance. But sometimes her intensity went too far. During that 11th-grade science fair, I found her in the lab past midnight, eyes tired, skipping meals to meet her high standards. It worried me. By 12th grade, though, she improved—she started taking breaks to recharge and finished her final project without pulling all-nighters. That shift showed she was learning to care for herself too.

Bushra's an amazing student- smart, driven, and inspiring. Her love for physics from the early days, her Olympiad and BUET successes, and her growing balance make her special. I'm sure she'll bring her talents and strength to your institution with pride.

Sincerely,

MD. ENAYET HOSSAIN
Physics Teacher,
Department of Physics,
Military Collegiate School Khulna
